Dear Hiring Team,

I am writing to introduce myself for senior software engineering and technical leadership roles on EU- or US-aligned remote teams. My background spans three concurrent engineering homes. I have served as Tech Lead at **DevTechGuru** since late 2021, working on web, mobile, and backend products for clients across nine countries. In parallel I run **TechnicalBind**, an independent software studio I founded in February 2017 and still operate with a small distributed team. I also teach advanced full-stack engineering at **Ostad**. Most of what I write, teach, and review is grounded in the same body of production work.

A few examples from production: a clinical AI tool I architected that reduced orthopedic joint-replacement planning time by ~40% on the first ward where it was deployed; a smart-parking platform handling 100,000+ vehicles with zero double-bookings since launch (a Postgres row-level lock removed a race condition that used to sell the same spot twice); a university CMS serving 2M+ daily reads, built through TechnicalBind. At DevTechGuru I contribute to the engineering rubric, CI/CD pipeline, and RFC-first design practice. Across the three engineering homes I have mentored 2,300+ engineers, mostly working developers preparing for senior or remote roles.

My stack is Python/Django and TypeScript/Next.js on AWS, extended into React Native, PostgreSQL, MySQL, and Docker. I am comfortable across system design, code review, infrastructure, and team mentoring, and I am most useful on teams where shipping production software, owning architecture decisions, and supporting other engineers all matter. My current setup includes full EU workday overlap and async written-communication practices, similar to how I already work with distributed contributors across nine timezones, so adapting to a remote-first team would not require a new way of working.

~40% planning cut

Clinical AI tool for orthopedic planning. 100% adoption on first ward.

100K+ vehicles, 0 conflicts

Smart parking, Postgres row-level locks. Race condition removed.

2M+ daily reads

University CMS via TechnicalBind. 2-day publish loop → 15 minutes.

2,300+ mentored

Engineers mentored across DevTechGuru, TechnicalBind, and Ostad.

WHY I AM APPLYING

- **Production experience.** 9+ years across an independent studio and a tech-lead role at DevTechGuru, covering HealthTech, PropTech, and enterprise SaaS for clients in 9 countries.
- **Senior responsibilities.** 4.5 years as Tech Lead at DevTechGuru. Architecture, code review, CI/CD, mentoring, and interviewing as part of the day-to-day.
- **Mentoring across three homes.** 2,300+ engineers mentored across DevTechGuru, TechnicalBind, and Ostad, mostly on the same stack I ship.
- **Async-first by default.** Distributed contributors, RFC-first design, written code review, and EU/US overlap are already part of how I work.

I would welcome a conversation about how this background could contribute to your team and the problems you are working on. My resume is attached; further work, writing, and live deployments are linked from **tausif.bd**, with source on **github.com/tausif1337**. The fastest way to reach me is email or WhatsApp at the numbers above.

Sincerely,

Md. Tausif Hossain

Tech Lead, DevTechGuru · Founder, TechnicalBind · Instructor, Ostad
